Frontend Developer Assessment

The goal of the assessment is to create a standalone web app that replicates the provided design (see design.jpg, which should also be provided to you). Your app should conform to the provided functional requirements. You should use Vue.js and Bootstrap 4, the rest is up to you. Note: read all requirements in advance, so you can divide your time appropriately. Finally, R6 can be implemented in many different ways, it is up to you to pick a suitable method. Also you probably want to start with R1-5 and do R6 last.

Requirements

R1. You should use Bootstrap 4 & Vue.js
R2. Design should be responsive.
R3. The top graph should display the combined values of the lower 4 graphs.
R4. Clicking one of the lower 4 graphs should increase their value by 1.
R5. Clicking the "Reset all graphs" button should set the current value of each graph to 0
R6. When the website is opened in multiple browser tabs, all tabs should display the same values. This means that input in one tab should result in the values in all browser tabs to update.
